Tracking Error and Execution Risk

As part of its daily operations, the Issuer may engage in the trading of Crypto Assets OTC and on exchanges. Scenarios involving such trades include, but not are limited to, rebalancing, where the allocation of the Underlyings are rebalanced to meet the new allocation requirements, forks, where newly-forked Crypto Assets collected may be sold at the next rebalance, and Airdrops, where airdropped assets may be sold at the next rebalance. Slippage may occur when the Issuer executes these trades, which may impact the value of the Collateral. For Products that

	<p>are related to the S&P Bitcoin Dynamic Rebalancing Risk Control 40% Index, at the time of rebalancing, execution may not precisely match the index allocation due to discrepancies between the execution price and the price used to compute the S&P Bitcoin Dynamic Rebalancing Risk Control 40% Index. This may result in a loss of value for Investors.</p>
