<i>Additional information related to staking</i>	<p>Staking is the process of validating transactions on the blockchain through the use of committed deposits on the Solana network. Every transaction on any blockchain requires validation from a node. In the case of proof of stake networks such as Solana, this can be done without significant computing power by proving that the node is holding a certain amount of assets referred to as a roll. Similar to mining, these actions are incentivized through by</p>

	<p>in-kind payments, known as staking rewards, from the network for the services performed.</p> <p>A portion of the collateral from this series will be used by the Custodian's nodes to authenticate transactions on the Solana blockchain.</p> <p>Staking may come with a risk of loss of tokens from incurring penalties, through a process known as slashing. If a disruption such as downtime or double-signing occurs, validator nodes may be subject to slashing. Slashing is designed to incentivize node security, availability and network participation.</p> <p>Further, illiquidity of staking returns to be converted into bitcoin or stablecoin may be difficult if there is little to no volume of the staked asset. Solana has a lock up period of 2 days. This may prevent all ASOL assets from being staked and/or may cause some delays in settlements.</p> <p>Rewards duration: similar to lockup periods, some staking assets may not pay out staking rewards daily and make re-investments delayed. Solana pays out every 2 days. This may cause some delays in reflecting staking rewards in the NAV.</p> <p>Staking rewards for any given network can vary tremendously based on the value of the network, the exchange rate of the assets to USD, the amount staked, the processing rate and the number of transactions on the network.</p> <p>Any staking rewards paid out as a result of the use of the collateral pool for staking will be added to the total value of the collateral pool less any applicable fees and commissions.</p> <p>Please see the Base Prospectus for more information regarding specific risks for Solana and additional information on staking.</p>
<p><i>Additional information related to risks</i></p>	<p><i>Additional Risks relevant to SOL:</i></p> <p>Ownership imbalance: There may be several large holders of Solana who may impact the price of the underlying asset.</p>

	<p>Technological risks: Blockchain and related tech are highly complex and this technological complexity can create complicated issues to resolve. Solana is a newer product than other more established crypto currencies. This could lead to enhanced technical risk.</p> <p>Inflation risk: Staking creates new units of the crypto currency. This may lead to increased risk of inflation when compared to assets with a fixed supply such as Bitcoin.</p>
